

Can Marinfold extend a few known contacts?

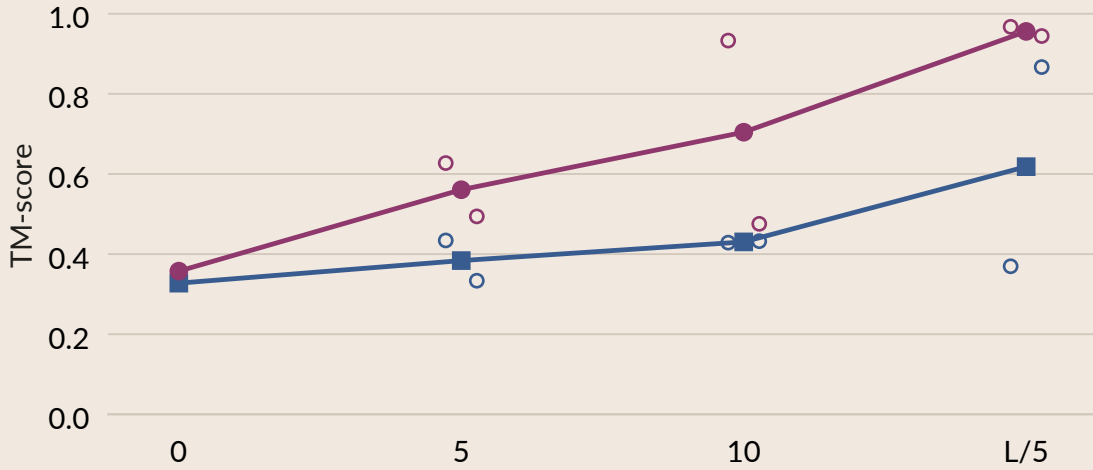

Same known contacts in both arms • five proteins with MSA depth <10 • no MSA input

Helico: supplied contacts only Marinfold fills to L/2 → Helico

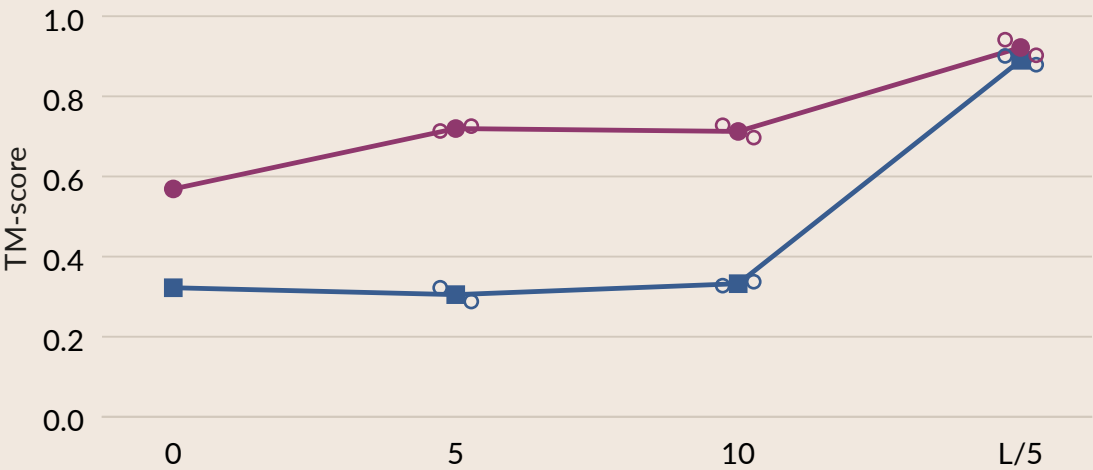

8ii8_A • depth 3 • L = 226

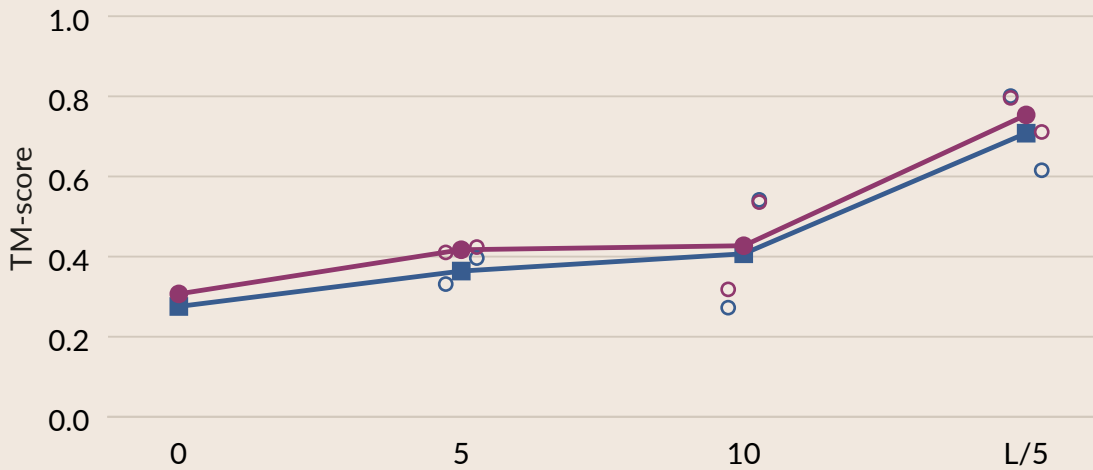

8oxk_A • depth 6 • L = 99

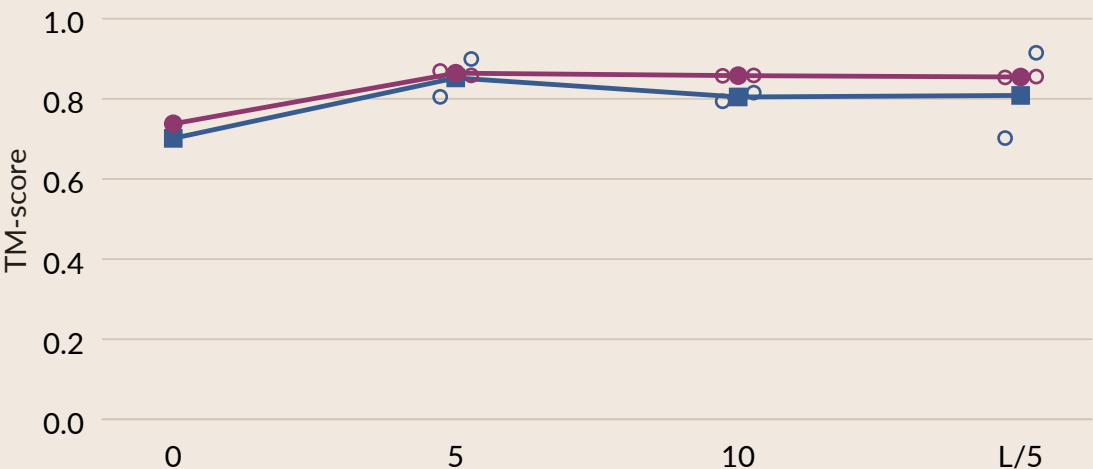

8qoh_A • depth 3 • L = 278

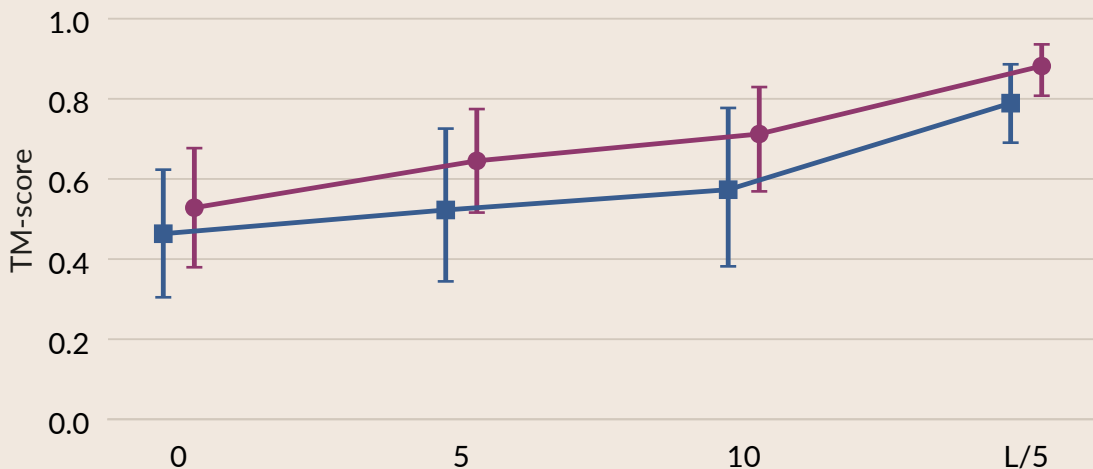

8ux2_A • depth 6 • L = 246

8wrx_A • depth 4 • L = 88

Mean of five proteins • 95% protein interval

Number of true contacts supplied → Filled points average two subsets; hollow points show each subset.

Marinfold: 248B-token checkpoint, 100-rollout consensus. Helico: confidence-select one of three structures per map.
